

VULSCAN
by RapidFireTools®

Stop threats in their tracks

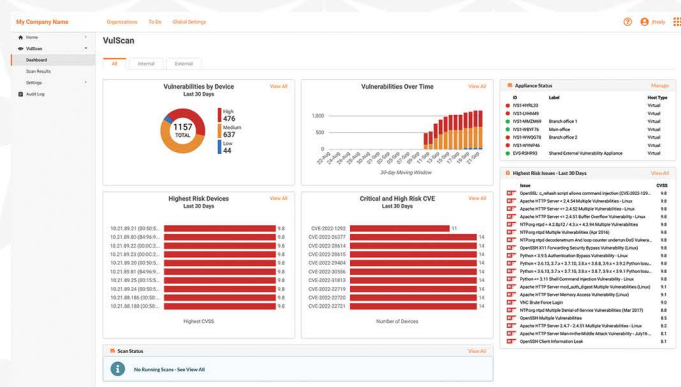

Hackers know the majority of smaller organisations are not protected against network security breaches, making them popular targets for cyberattacks. Security vulnerabilities have grown steadily year over year with no signs of slowing down. And still, **62% of SMEs are not aware of vulnerabilities in their company.**

VulScan allows us to perform a scan of all of your networks and manage them to identify vulnerabilities, decreasing the likelihood of your business falling victim to cyberthreats.

How does VulScan keep my business safe?

VulScan is an internal and external scanning solution that can be set to run whenever and wherever you want. Delivering an 'X-Ray' of your network, it ensures you maintain high levels of IT security by scanning for vulnerabilities on a regular basis. This means we can proactively manage weaknesses that could be exploited to gain unauthorised access to your system or network.

Regular vulnerability scanning forms part of a best practice cybersecurity strategy, no matter the size of your business.

Key Benefits of using VulScan with KubeNet:

- Rapidly identify your gaps and vulnerabilities before cyber criminals find them
- Fixes can be implemented quickly, keeping your business safe
- Assess and understand your security level, allowing you to develop your security strategy
- Save your business money by avoiding costly downtime
- Meet data protection legislation requirements
- Ensure your business meets evolving cybersecurity demands
- Enhance credibility with your customers, partners, and stakeholders

Your Trusted Technology Partner

Threats to your network are continuously evolving, affecting sensitive business data and devices. A proactive approach is required to step in before your security gaps become costly.

The good news is that regular vulnerability scanning can identify these flaws in your network before cyber criminals do.

We know you want to ensure your business is protected, and compliant with ever evolving security standards. As **Your Trusted Technology Partner** we take care of your network, leaving you more time to focus on your core business.
