

WE'VE GOT YOUR BACK

**KubeNet
MANAGED
FIREWALL
SERVICE
(KMFS)**

KubeNet Managed Firewall Service (KMFS)

The Modern cybercriminal is using ever more sophisticated techniques to break through network defences and attack your business systems. Keeping intruders out and keeping full and productive services up requires comprehensive security policies, firewall management and constant monitoring to keep pace with evolving threats.

KMFS protects your network from unauthorised access and other security threats. Hosted in secure carrier class Data Centres, the service is provided as a virtual solution from a private cloud. The service, is provided on an IaaS basis and our customers benefit from increased management and no need for expensive capex & on-site maintenance fees, vastly reducing the total cost of ownership.

Why a Managed Firewall Service makes sense

Virtual partitions in a multi-tenant environment allow delivery of more scalable and flexible solutions. KMFS customers get their own dedicated virtualised Firewall and, to ensure reliability the Firewall is duplicated to provide high availability and resiliency via the standard practice of active-passive pairing reducing business risk.

We will design, configure and maintain your Firewalls on a 24 x 7 basis and as part of KMFS we undertake all the regular software patching and upgrading, configuration changes and routine configuration back-ups.

KMFS from Kube provides tangible business benefits through reduced risk, peace of mind, lower costs and economies of scale and, as a fully managed service or managed install, it also provides Network integrity.

Why choose KMFS over a traditional on-site Firewall?

KMFS is fully managed by Kube and is provided centrally from our Cloud, making it simple for our customers to scale their business. If you open up new locations, our service is readily available the moment you connect onto our Network and there's no need for Network configuration or additional hardware costs.

The solution is built using multiple high availability resilient Firewalls working as an active-passive pair for failover purposes, the service is highly robust and comes with industry leading SLAs.

KMFS suits customers of all shapes and sizes who

- do not want to manage their network security in-house
- looking to complement their existing security infrastructure
- need to improve their Network Security
- require a service provider to develop their security design

Key Benefit Highlights of KMFS

- Fixed Monthly fees – “no surprises & keeps costs low”
- Enhanced, managed and maintained Security for peace of mind
- A Cloud service including all support maintenance and upgrades
- SLA agreements tailored to your needs
- Flexible and importantly scalable & adaptable to meet the needs of your business
- Firewall resiliency as standard
- 24/7 pro-active monitoring
- Expert advice on security policy and settings
- No capital expenditure or maintenance
- Comprehensive protection against internet threats and attacks
- Incident evaluation and response
- Optional Customer security policy management

KMFS Service Features

KMFS is an enterprise grade security appliance for use as a virtualised solution. It sits and works from our core network and forms part of a host of support services and products provided separately or as a fully managed solution.

KMFS Technical Benefits Check List

- ✓ Hosted in secure Tier III Data Centres
- ✓ Full Unified threat management available (UTM)
- ✓ Traffic shaping
- ✓ DES, 3DES & AES encryption support
- ✓ Labs certified
- ✓ Health monitoring
- ✓ Configuration back-up
- ✓ High availability as standard
- ✓ Security management & monitoring

About KubeNet

At KubeNet we listen to what our customers want, understand what they need, and then deliver world class ICT and Telecommunications services designed to connect and protect their business. Our Next Generation Network is designed to support businesses, from small organisations to large multi-site enterprises, with Connectivity, Voice, Cloud and Security services built round you. Whether it's in the UK or globally, our experienced customer focused team are here to make sure that you'll get the right solution at the right price.
